Innovation by designers in healthcare

Design for one	Design for all
local	global
unique	standard
bottom up	top down
small volume	high volume
proximal	distant

Project Makerhealth

Designed by Felix Hoog and Jellert Devos with zorggroep Heilig Hart & Pili Pili design Agency.

Sustainability- -as-flourishing

Sustainability-as-flourishing is an emergent outcome of a dynamic systems construct of a future state which goes well beyond mere survival.

Key ideas from sustainability-as-flourishing are that profit is a result rather than the purpose of a viable enterprise.

(Schaefer et al., 2015; CEL, 2017; Laszlo et al., 2012; Drucker, 1974)

Bridging the two concepts

Frugal innovation

- Focus on **local product design (low tech, high impact)**
- Cost reduction in **financial** terms
 - mainly achieved through **changes in production**

Sustainability-as-flourishing

- Focus on **business model**
- Cost reduction in **financial, societal and environmental** terms
 - mainly achieved by **adopting a systemic view** of the product-service-system / business model

Bridging the two concepts

Frugal innovation

Sustainability-as-flourishing

Why?

Our aim is to co-create frugal innovations and make them accessible to healthcare organisations. In this process, we specifically focus on respecting the needs for flourishing and we do that by striving for an overall cost reduction.

Overall trajectory

Hack → Frugal Business Plan

D1: Hack or “design for one”

D2: Design of business model

D1: OPEN USER INNOVATION

D2: FRUGAL PRODUCER INNOVATION

Adapted from

Von Hippel E. *Free Innovation* (2017): How citizens create and share innovations, Mit Press

Example 1st iteration: from hack to business model

From hack to business plan

- + Improved product
- + Ready for market
- Lost a lot of time redesigning
- Tendency to overdesign

Overall trajectory

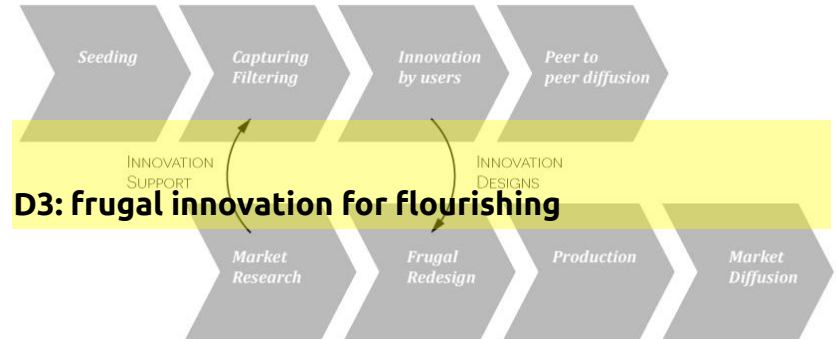

Hack → Frugal Business Plan (MVP)

D1: Hack

D2: Design of business model

D3: Frugal innovation for flourishing

D1: OPEN USER INNOVATION

D2: FRUGAL PRODUCER INNOVATION

Adapted from

Von Hippel E. *Free Innovation* (2017): How citizens create and share innovations, Mit Press

Experiment setup 1/2

Who?

- 10 teams (= 40 students)
- 5 teachers / coaches
- Health care centra
- Design agencies

When?

- 12 weeks
- Oct. to Dec. 2020
- *...in progress!*

What?

- Translating a 'hack' into a Frugal innovation for Flourishing.
- Experimenting with specific tools (= radar).

Experiment setup 2/2

How?

- Weekly interviews with students
- **Case study** / through design
- Observations of usability of the tools (= *radars*)
- Possible survey at the end of the course

Input

- Lessons on
 - Frugal innovation
 - Flourishing business canvas
- Tools (= *radars*)

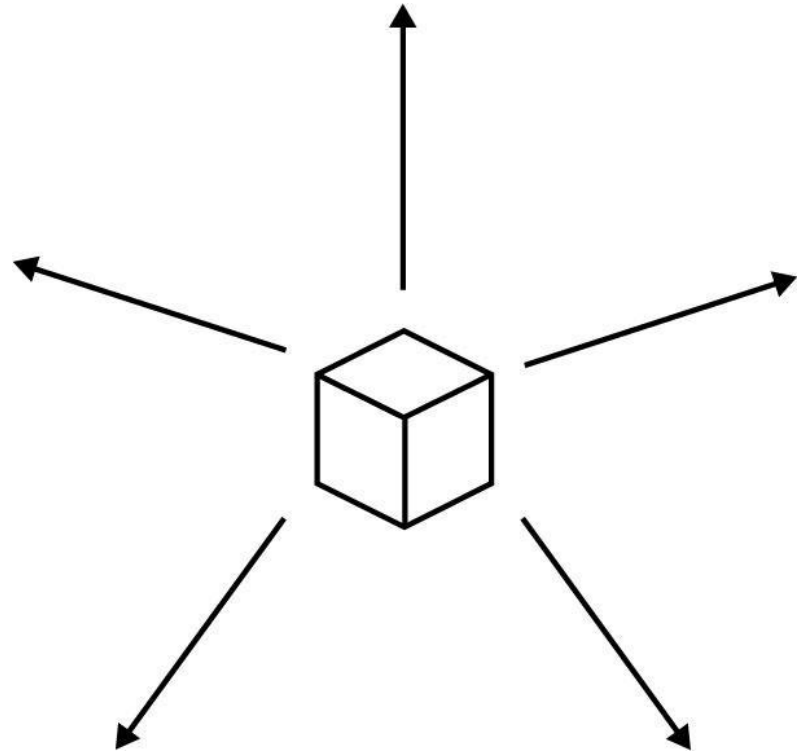

Output

- Business plan
 - Financial, marketing & production plan
- Used tools (= *radars*)

The radar as tool & method

The radar is a tool (and methodology) we designed in order to help designers identifying and focusing only on the **core functionalities**.

Furthermore, it helps you in **optimizing the performance level** of the core functionalities which, in the end, will lead to **fundamental cost reduction**.

Step 0

Step 0.1

Step 0.2

Step 0.3

Step 0.4

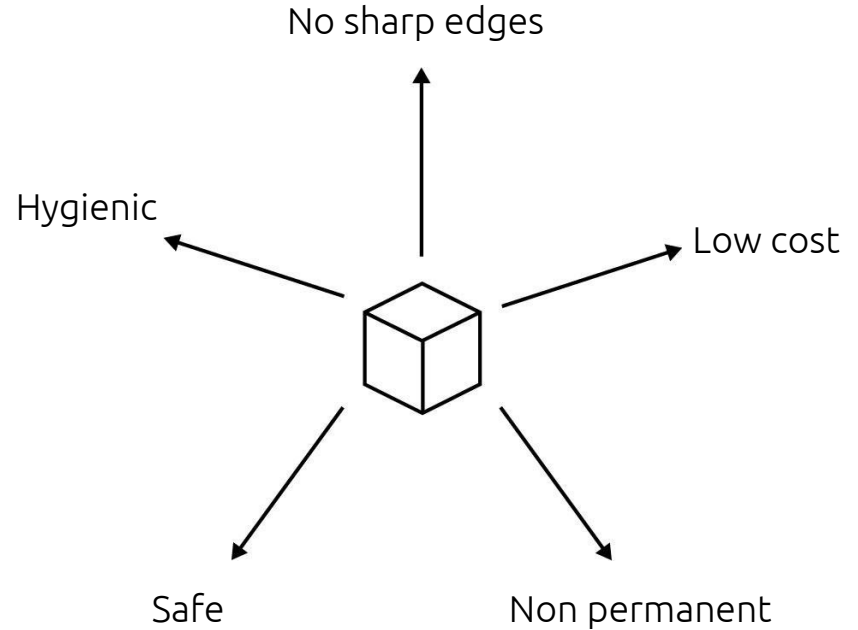

Define & Refine requirements

Focus on core functionalities

Step 0.1

Plot requirements based on hack and info stakeholders

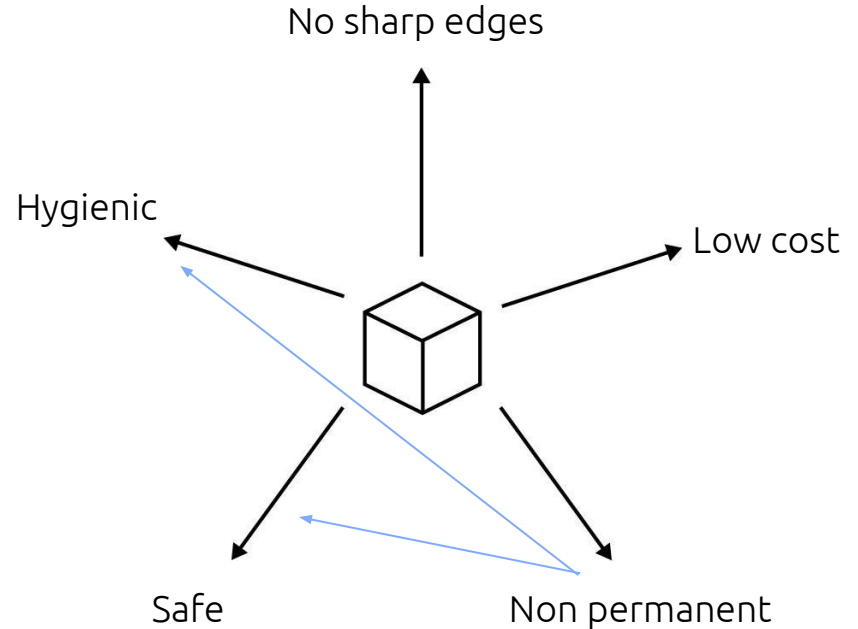

Step 0.2

Analyse requirements

What does it mean?

- How is it implemented in the existing hack?
- Why is it important?
- For who?
- Rephrase
- Are some requirements connected?

Step 0.3

Redefine requirements

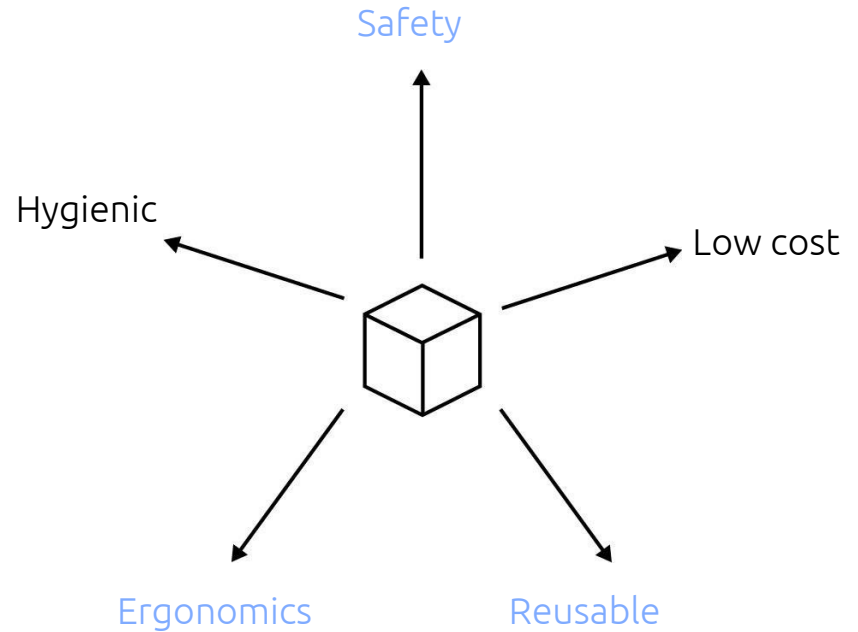

- Select & redefine most important ones
- Add the ones that might be missing
- Give a specific definition

Step 0.4

Contact stakeholders

Inform your stakeholders & ask if they agree with your changes?
If needed, make a second iteration.

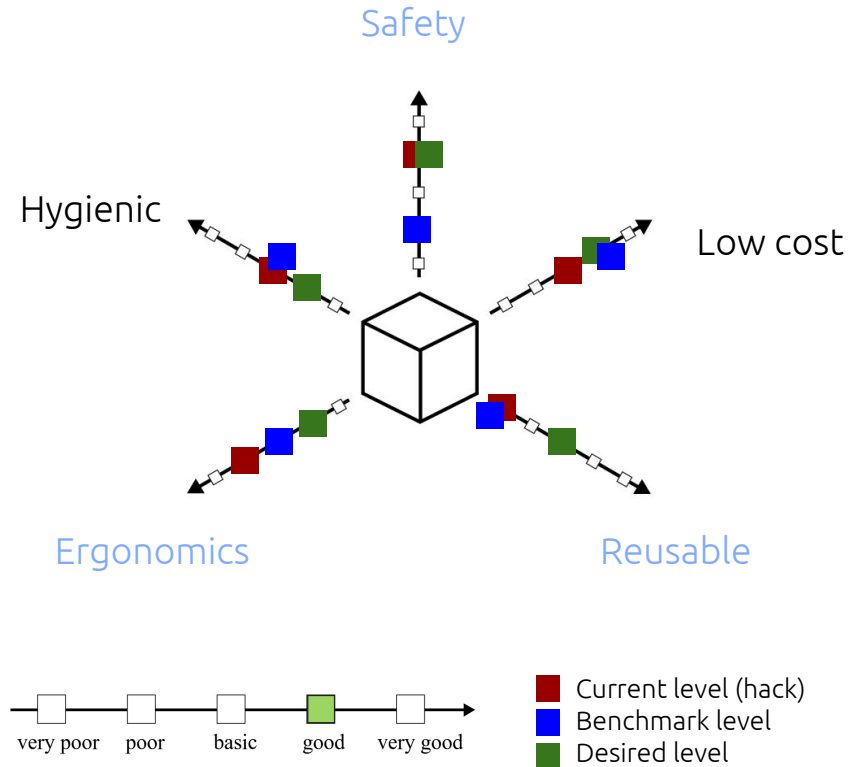

In progress

Step 1

Describe in a qualitative manner how to evaluate the top 5 requirements of their design, **evaluate the difference between the hack, benchmarks** (in ordinal manner: better, worse, same), **identify your desired level** (in ordinal manner: better, worse, same). This for each requirement, for each 'score'.

Focus on optimised performance level

"hygienic is **good** when happens fast and with good a outcome (little bacteria left)"
"hygienic is **poor** when happens slow and has a poor outcome (bacteria left)"

In progress

Step 2

Describe in *quantitative* manner how to **evaluate top 5 requirements** of their design, with the three layers of the FBMC: economy, society, environment. Evaluate difference with IPO and benchmark.

Focus on optimised performance level

"hygienic is **good** when happens in 10 seconds and with 20% bacteria left"
"hygienic is **poor** when happens in 30 seconds and 80% bacteria left"

In progress

Step 3.1

Use the **Flourishing Business Model Canvas**. While designing your BM keep on exploring the three layers (economy, society, environment) and keep on checking if your desired level is reached.

Focus on fundamental cost reduction

In progress

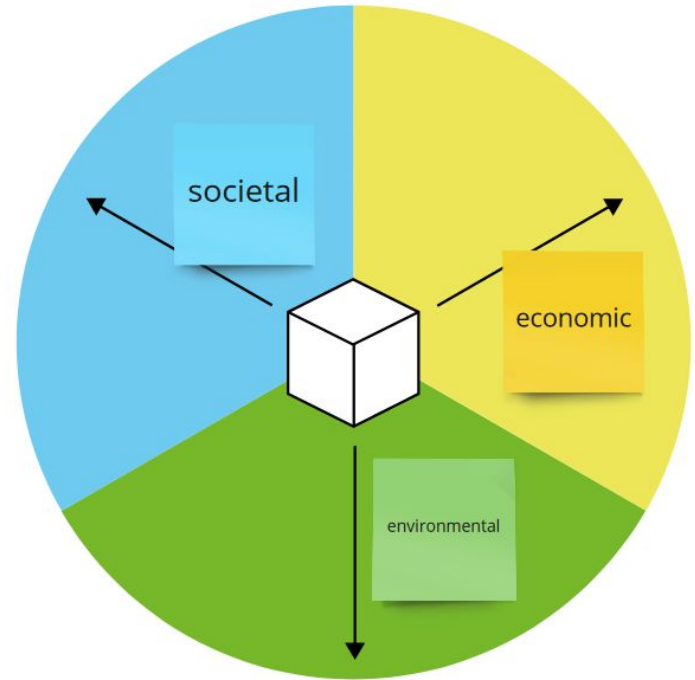

Step 3.2

Check on the actual cost reduction, on three aspects:

economy, society and environment.

This means: try to define qualitatively how to evaluate your requirement on each aspect.

↓
Focus on fundamental cost reduction

Mona: Reflux Pants

Eliminate

Risk of children sliding down in their beds.
Danger of children being incorrectly fixed to their beds.

Reduce

Complexity to keep the baby well positioned in its bed

Raise

Functional and aesthetical
Warm, comfortable
Not necessarily medical

Create

Easy-to-use product
Aesthetic added value

& next steps**

Example step 0

Radar plotting

- Plot fundamental criteria / core functionalities
- **Observation: desired level vs current level**

Next steps

(1) Proceed with data collection till Dec. 2020

(2) Conduct data analysis (which is already in progress)

(3) Report back on our main goal:

to co-create frugal innovations and make them accessible to healthcare organisations. In this process, we specifically focus on respecting the needs for flourishing and we do that by striving for an overall cost reduction.
