Bringing Systemic Design to Communities with the Circular Design Lab

Tuesday, October 13, 2020

Chris Oestereich and Courtney Savie Lawrence

Please join our ice breaker here: bit.ly/rsd9ib

We are a self-organized, citizen-driven project focused on
prototyping and delivering solutions
to humanity's big challenges.

**A collaboration story
that begins with a
common goal**

Guiding Questions

As we began the project, we discussed what we wanted to achieve as we looked to align around a shared purpose. In doing so, we asked each other questions like these.

- How could we foster the sorts of impacts we're seeking, but at a much larger scale than we were?
- How might we leverage the skills within our group to make that happen?
- How could we marry design principles with systems thinking in a way that's accessible to a broad audience?
- How could we instill the confidence in others to test possibilities?
- How could we design a program that was intentionally inclusive and open?

Circular Design Lab: The Backstory

Goal #1: Create Community

circulardesignlab.org

Goal #2: Build capacity for future possibilities.

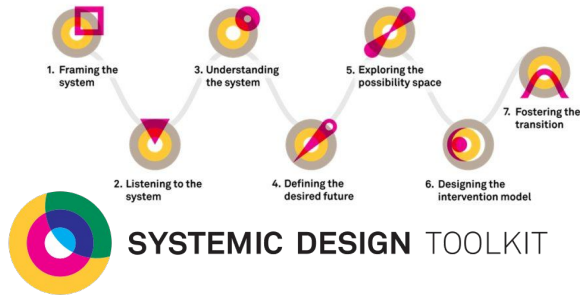

circulardesignlab.org

Goal #3: Use Systemic Design to Drive Beneficial Change

Air Pollution is one of the biggest risks to planetary health

HEALTH

Air pollution is the leading environmental health risk. It is responsible for 6-9 million premature deaths annually. It also contributes to the large global burden of respiratory and allergic diseases.

FOOD

Air pollution reduces crop yields. Estimated 6-12% global yield loss for soy, wheat, maize, rice at 2010-12 pollution levels; higher in some regions.

WATER

Air pollution has been shown to weaken the monsoon, disrupt rainfall patterns, and increases storm intensity – locally and across continents and hemispheres.

CLIMATE

Reducing air pollution could avoid an estimated 0.6°C of warming by 2050, slow the pace of Arctic warming by 2/3, and reduce heat islands.

BIODIVERSITY

Air pollution, particularly Sulphur and nitrogen emissions, and ground-level ozone affects forest and vegetative health.

“We call ourselves the ‘Circular Design Lab’ - a 100% volunteer, citizen driven, ground up (experimental) open innovation “platform”. We aren’t technically registered, we don’t have a director, we don’t have sustainable funding sources, we don’t have a manifesto, yet we have been able to run on the energy that civil society idea and social capital offers.”

Bangkok's Pop Up Civic Experiment: The Circular Design Lab 2.0 — from leverage points to zero waste cocktails

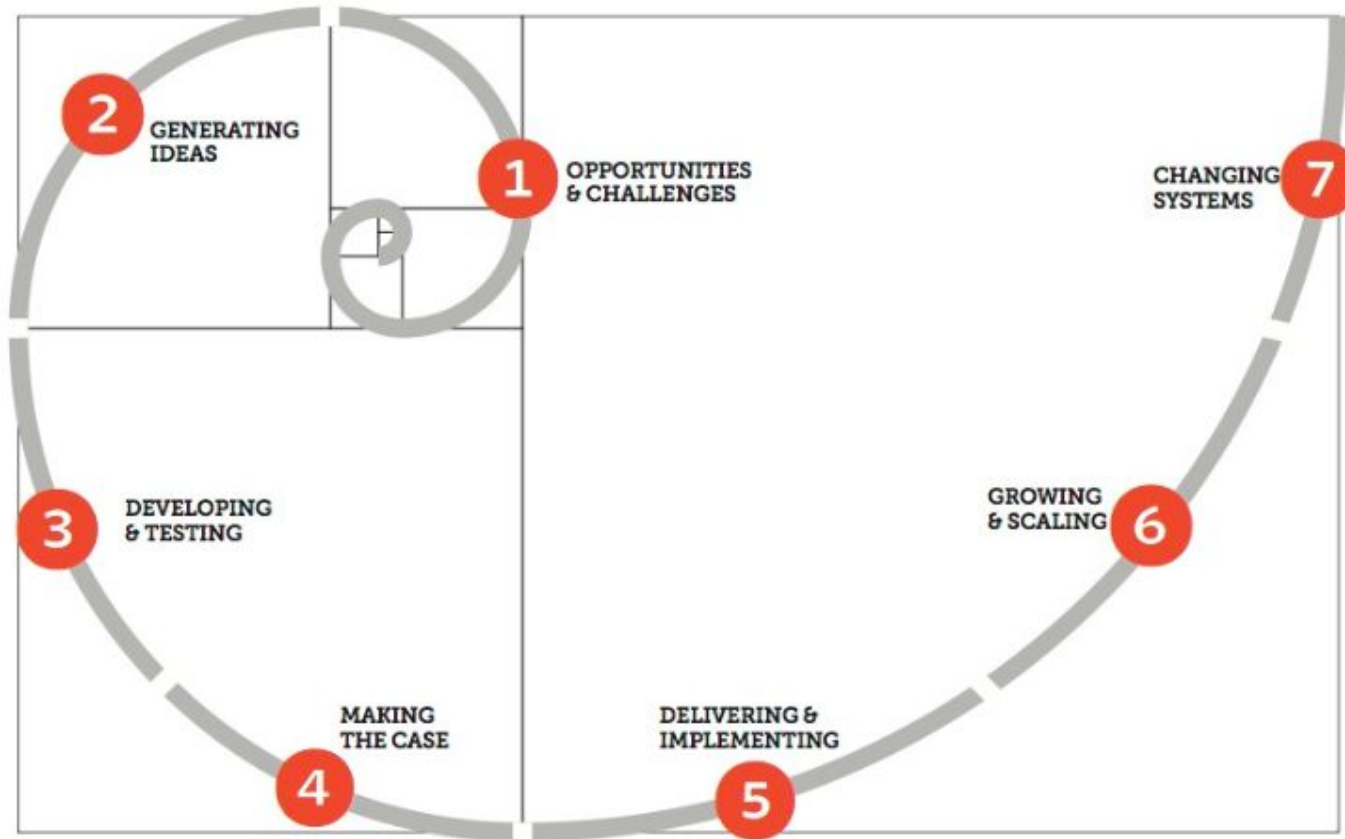

Courtney Savie Lawrence
Jan 29 · 9 min read

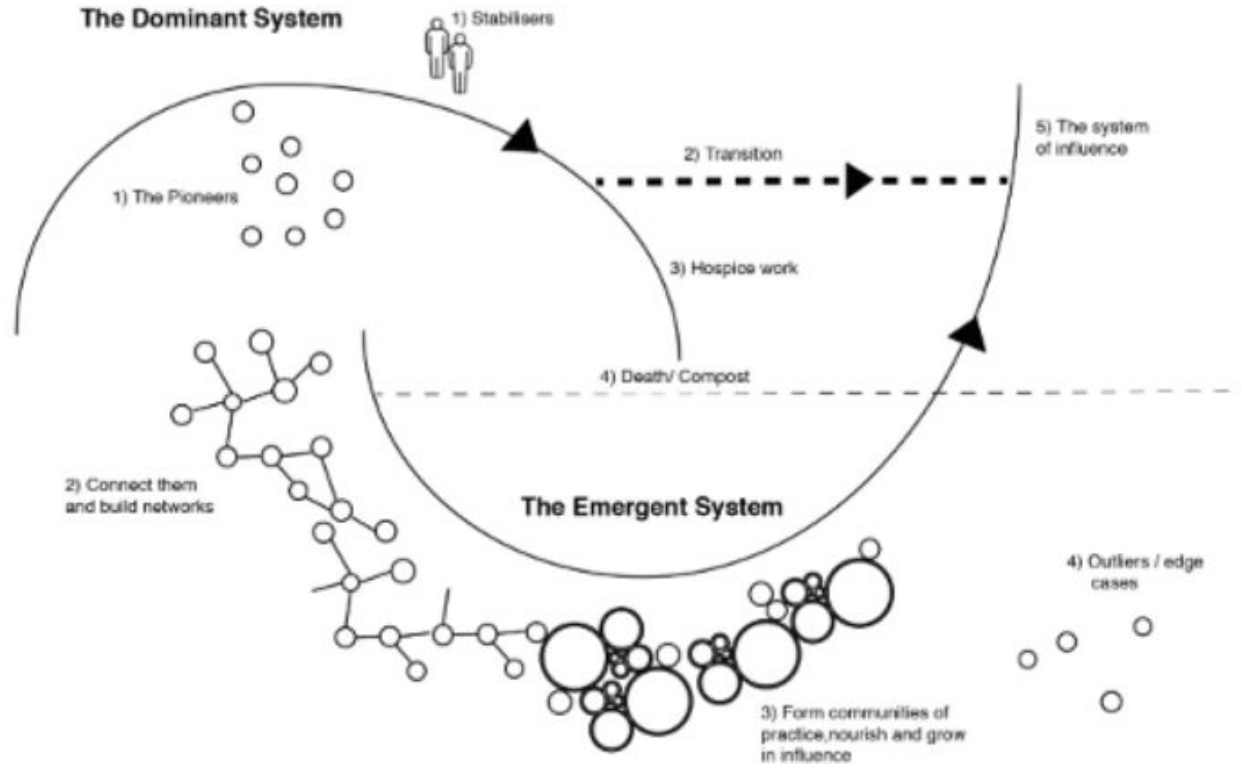

In less than 12 months, an idea sparked by a handful of people has since evolved into a grassroots, community driven collective that includes more than 20 coleads and has brought together more than 150 others across meetups, public events and systemic design workshops. But why? And more importantly, what have we been discovering along the way that has meaning and momentum?

Big Picture: Contextualizing Our Innovation Approach

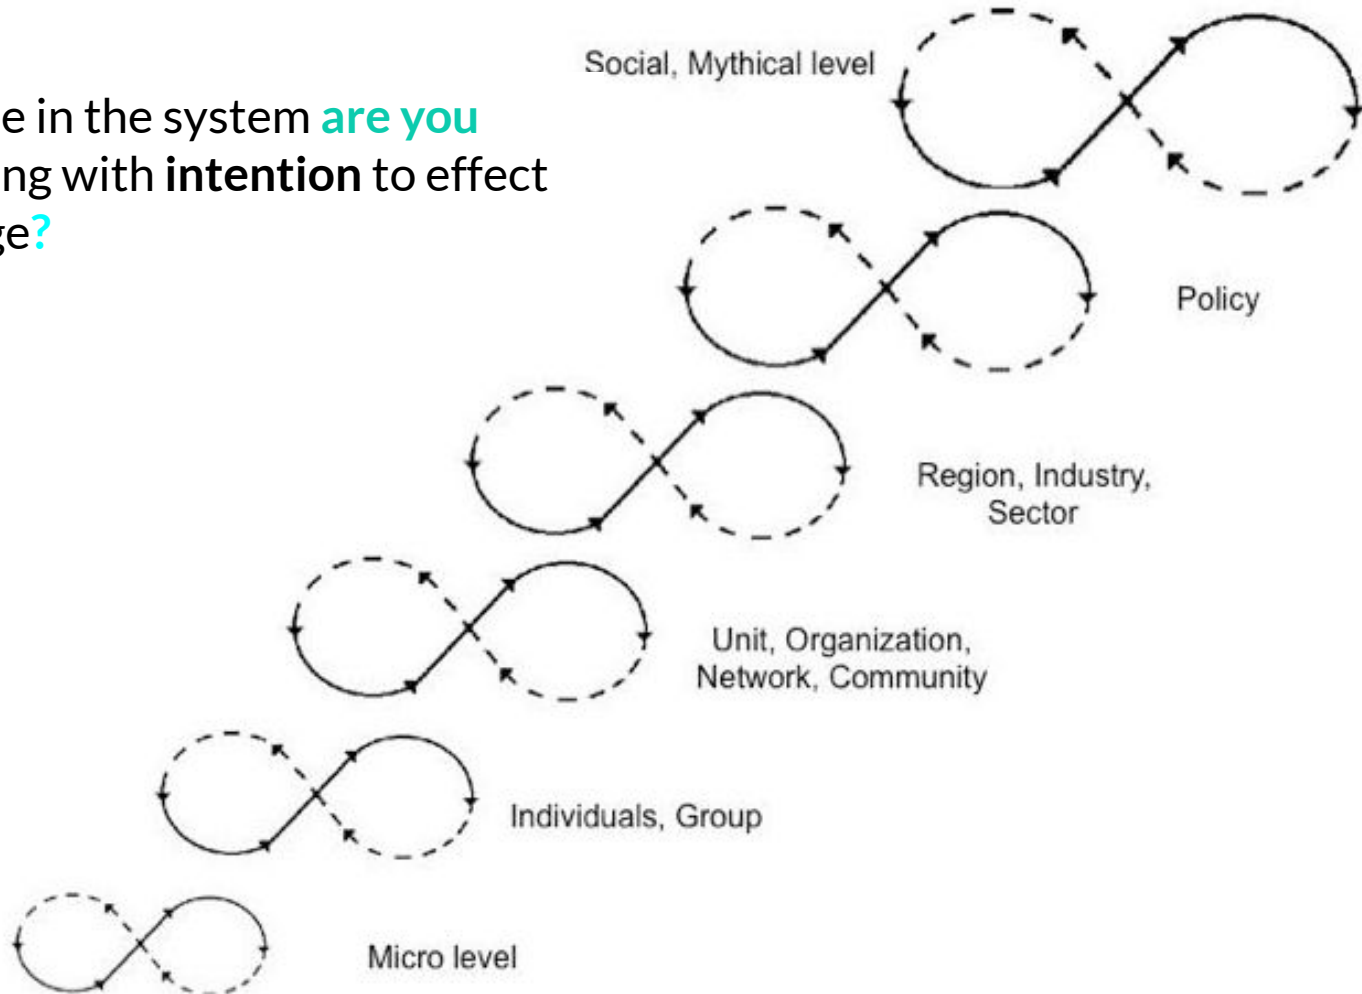

We know, feel and sense that we are in
a significant time of exponential
transition

simultaneously in the midst of a sea change from the 'dominant system' to
the 'emergent system'.

Where in the system **are you**
working with **intention** to effect
change?

AirVisual Earth Shot Taken March 10, 2020 — the day that Chiang Mai, Thailand was recorded as the most polluted city on earth

Circular Design Lab Notes: from #airpollution to citizen driven policy design — what we are discovering in Bangkok

Courtney Savie Lawrence
Mar 12 · 7 min read

By the co-leads of the Circular Design Lab air pollution track: [Courtney Savie Lawrence](#), [Weenarin Lulitanonda](#), [Laura Hammett](#), [Sivalee Anantachart \(Soma\)](#)

The [Circular Design Lab](#), as detailed in a recent [previous post](#), has been up to a lot in the past twelve months. Since flinging open the digital doors to see who in Bangkok would be keen to invest time towards tackling some of the most entrenched and complicated societal issues, we have seen the volunteer run community grow from less than five people to several dozens more. Our open innovation platform has since held two cycles of 'systemic design' workshops focused on the tricky themes of *waste management*, *unsustainable fast fashion* and *air pollution*. Now, in 2020, the resultant

Waste \ Air Pollution \ Sustainable Fashion Systemic Design Workshops

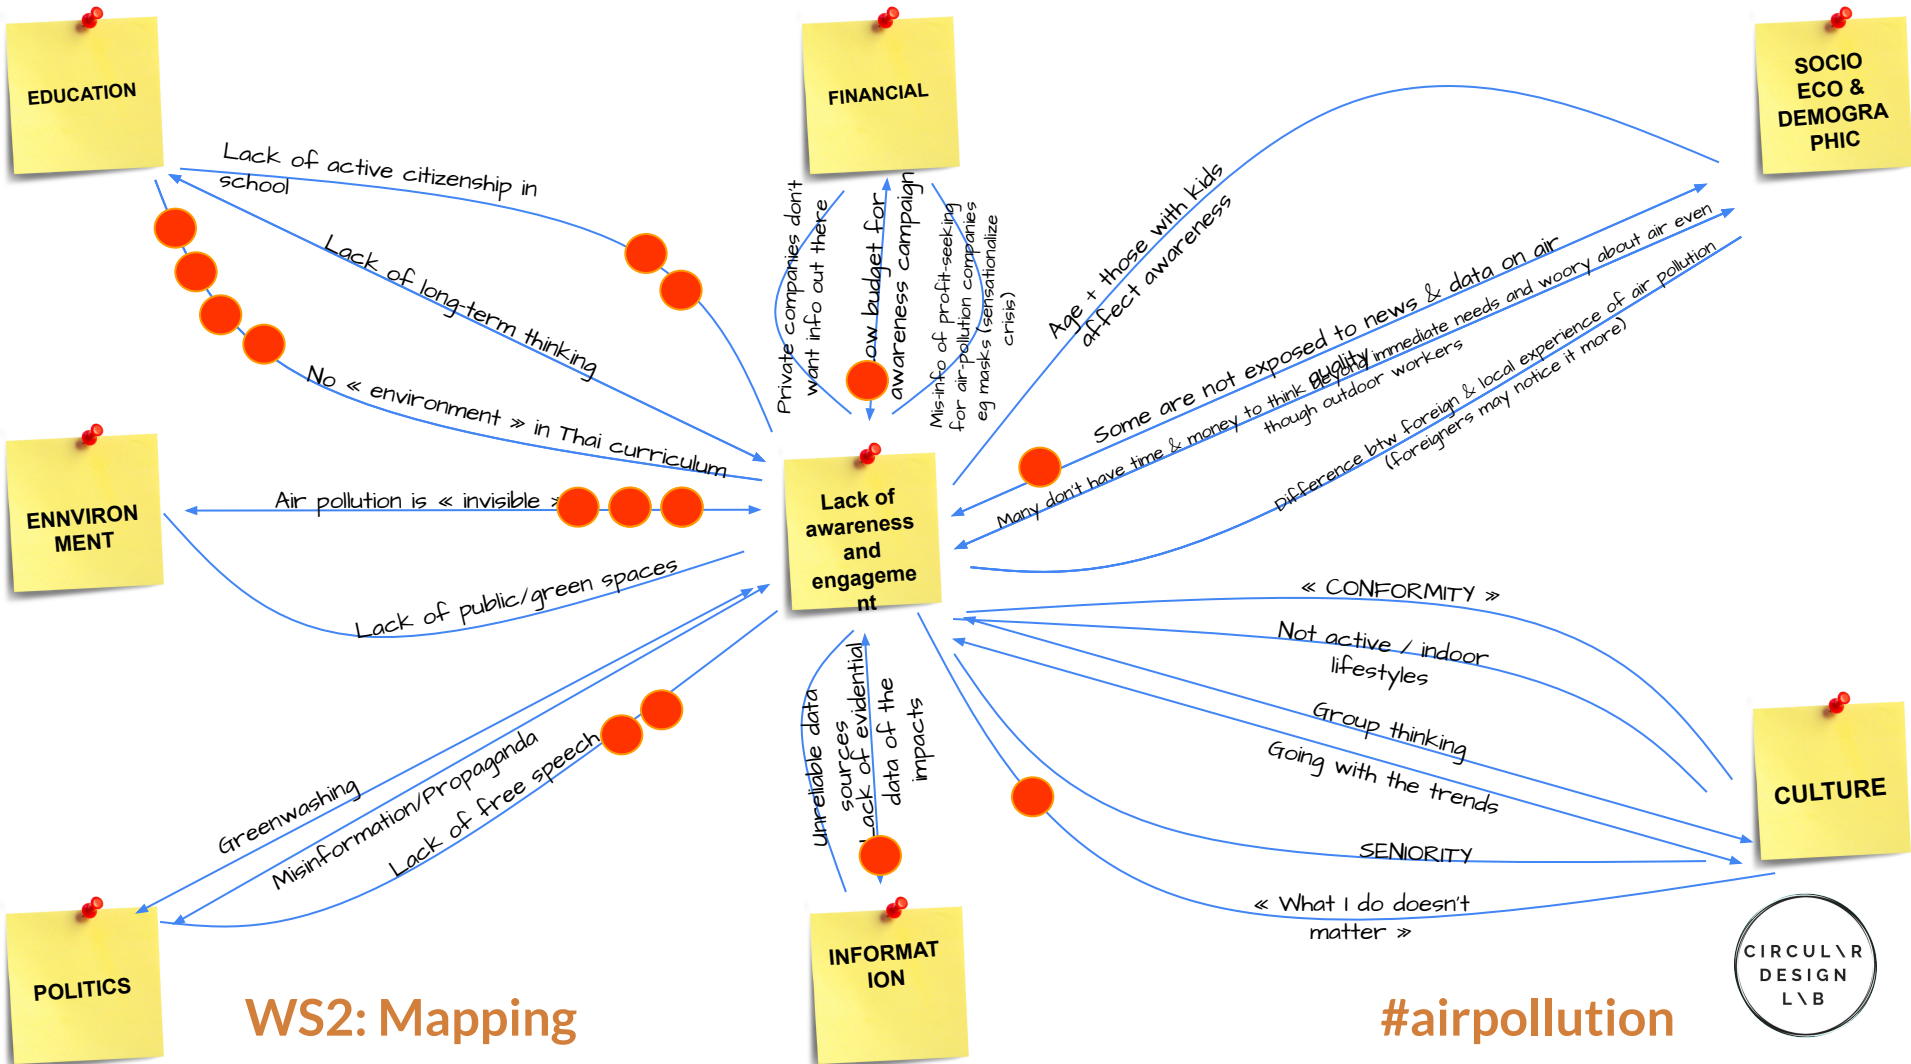

Registration and Participation in Workshops 1-3 Required
(experience is offered free, at no cost)

Who's co-leading the workshops? Take a look at the team and profiles [here](#).

About systemic design as an innovation process: Our workshops are designed to build off of one another, so from the first workshop to the last you will learn about systems change and human centered design as tools that help us discover possible ways to see the challenges (of waste, air pollution, fashion) in new and different ways. We will also work to find 'leverage' points, or strategic ways to experiment with solutions to the challenges we see. We will work in teams- you can come alone, encourage a friends to apply with you or simply meet other likeminded folks to become a team with during the workshops.

ROAD SHOW
LEARN X TAKE ACTION

FROM 2.5 TO ZERO

Did you know that we have partnered with the RSA Student Design Awards and World Resources Institute on a brief to support the creative response to Air Pollution? [More here](#)

[Start Here](#)

At the human scale, this is what you can do

Want to educate yourself more or influence policy?

Start with the data and facts - the latest research for the Thailand context is below for you!

Explore the reasons why air pollution exists

Below we want to keep it simple. Here are three options you can enjoy:

"Clean Air White Paper"

published 2019

Have only a few minutes? This high level overview of the Air Pollution context in Thailand will get you caught up to speed in just a few short pages.

[See the PDF you can download here](#)

"Clean Air Blue Paper"

published 2020

Maybe you looked through the White Paper, and want to go deeper- indeed this is what the 'Learn' inhale track is all about. This paper, created by medical professionals, environmental lawyers, economists and researchers goes well beyond the surface - a rich synthesis of data, evidence and facts, under 200 pages will ensure you are well equipped to shape your life, community and policy.

THE RIGHT TO BREATHE

How might we ensure that everyone
living in areas with poor air quality is
guaranteed their right to clean air?

Workshopping our way to impact

Session Overview

Ex 1: Sharing Experiences & Reflecting

- Participants will share:
 - What brought us to systemic design
 - What we use it for
 - How we spread its use
 - What we think might help increase its spread
- We'll then reflect on what they've heard from our groups

Ex 2: Rapid Ideation & Sorting

- We'll propose ideas for delivering systemic design with communities and making it more accessible in general
- Then we'll sort ideas based on perceived feasibility and impact to give us one view of the possibilities we've created
- Given time, we'll do a bit of sharing.
 - If not, we'll share the outputs with all participants

Exercise 1: Sharing & Reflecting

- We'll send everyone to breakouts in a moment. Links will be shared to your template in chat.
 - Facilitators will assist with the exercises.
 - An outline with detailed instructions is available in the upper-right corner of the screen.
 - We'll come back to the main room for Exercise 2's instructions.
-
- Step 1: Share your responses to the 4 questions on post-its and discuss with your group
 - Step 2: Reflect on what you've heard

Outlines

RSD9 - Bre... Bringing Systemic Design to Communities with the Circular Design Lab

Exercise 1: Sharing Experiences

This exercise is designed to foster the beginnings of a shared understanding of collective use of systemic design.

Step 1: Answer questions 1-4 and share with your group.
Step 2: Reflect on what you learned with question 5.

1 What brought you to use systemic design?
What have you been working on in your organization?

4 What would enable its mainstreaming at the community level?
What resources and support does your organization?

2 How do you use it?
What are the challenges and opportunities? What do you use it for? What do you not use it for?

3 How do you spread its use?
What are the challenges and opportunities? What do you use it for? What do you not use it for?

Exercise 2: Rapid Ideation for Experiments

This exercise is designed to help you develop a shared understanding of your circumstances. We'll then develop ideas for experiments to help further the use of systemic design with a focus on engaging with communities.

Step 1: Sort the points in this framework based on your assessment of the idea's feasibility and potential for impact.

Impact

Feasibility

1 Overview

In this breakout discussion, we'll share some of our efforts to help begin to build a shared understanding of our circumstances. We'll then develop ideas for experiments to help further the use of systemic design with a focus on engaging with communities.

2 Exercise 1 (Step 1): S...

This exercise is designed to foster the beginnings of a...

3 Exercise 1 (Step 2): R...

1. Reflect on what you heard from others and share related...

4 Exercise 2 (Step 1): R...

Use post-its to share ideas about any of the following:

5 Exercise 2 (Step 2): L...

Exercise 2: Rapid Ideation & Sorting

WHAT YOU DO MATTERS.

- Step 1: Rapid Ideation
 - Take stock of the sharing and reflection exercise and think about what might be done to foster broader community participation with systemic design
 - Things to possibly consider (*These are all in the Outline for Ex. 2: Step 1*)
 - Think about roadblocks and potential enablers
 - What sorts of experiments might be tried? (Even if you're not interested, it might be useful for others.)
 - What sorts of resources might be beneficial?
 - Who could support such efforts?
 - How might we help potential supporters see the value in doing so?
 - How can we build ecosystems that can support and deliver change?
- Step 2: Idea Sorting
 - Looking for possibilities from the ideas we surface

Sharing/Final Thoughts

- Were there any key learnings or insights?
- What possibilities intrigued you?
- How could we take these ideas forward and support each other?

Thank you
